

Tesla Energy Lights™ Dedicated Team

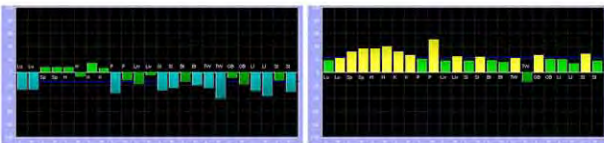

Tesla was a 19th century genius. His goal was to bring in wireless technology but was simply ahead of his time. He gave us a blueprint to start with in his Tesla Coil. Tesla sparked 20th century inspiration with our team of 3 very competent co-inventors. In 1994, Mark Hoffman (production), Kent Noonan (engineer) and Ken Bental (medical intuitive) collaborated. They found that harsh high voltage was not the acceptable but rather ultra high soft frequencies were. The world was not ready for wireless a century ago but our team's commitment to develop this conscious technology tool for 15 years has culminated today, into the finest 21st century Subtle Energy Activation Electron Donor System available.

NEW for 2009 - We proudly introduce the world's 1st heavy duty user interface • **Power Control Dial.**

- Allows user to choose power settings independently "soft" minimum to "potent" maximum
- Reduces maintenance: User can adjust spark gaps on-location, instead of returning to factory

Testing with the EIS for Objective Data Quantitative Proof that Tesla Lights Work

Actual before and after scans after 6 hours in a Day Study

Tesla Energy Lights™ is an electron donor system with a full spectrum of ultra-high frequency harmonics. All but forgotten by the general public, the technology had its genesis in the 1920s when Nikola Tesla, inventor of AC electricity, collaborated with and at the request of Dr. Georges Lakhovsky. Tesla helped Dr. Lakhovsky build a device containing a Tesla Coil, MultiWave Oscillator and an Argon gas tube.

Team Credits

- Inventors & Creators of the First Multi-Tube Array Carousel*
- Only AC-DC (yin-yang) bias units (work together or alone)*
- Crystal Center Tube (emits 100% of ionic frequencies)*
- One and only User Interface Dial to control power*
- Alpha state interactive for intention and intuition*
- Allows user to sit, stand & lie down positions*
- International Agent Support Network*

Tesla Energy Lights™ is a conscious alignment tool. The manufacturer, distributor and agents choose to comply with the regulations set forth by our federal agencies, that is by not making claims beyond those allowed by law. The statements herein have not been evaluated by the FDA. No medical claims are made or implied of any kind. This product is not intended to diagnose, treat, cure or prevent any disease. For medical services, please consult a licensed doctor or health care professional.

Q: What is it and what does it do?

A: The Tesla Energy Lights™ are a subtle energy activation system™ composed of two units, the AC and DC machines. Each unit has two parts -- the base and gas tube carousel. There is an on-off timer located on the front of each unit. Each unit plugs easily into a standard 110 volt grounded wall outlet. Our units are conveniently portable, weighing only 23 lbs., and are easy to operate.

The base of each unit encases a proprietary Tesla Coil and a multi-wave oscillator configuration. When the units are turned on, they are designed to generate ultra-high frequencies of low voltage electromagnetic and photonic subtle energy. On top of each unit sits the gas tube carousel. The twelve Pyrex tubes held in each carousel are filled with noble and common gases (hydrogen, helium, neon, argon, krypton, xenon, nitrogen, oxygen, air and water vapor). The longer center silicon crystal tube contains a proprietary blend of gases.

When the units are activated, the gases inside the tubes are excited by the electromagnetic energy generated by the Tesla Coil and multi-wave oscillator, and as a result, gas ionization occurs. This frees the electrons in the gases to migrate into an invisible energy field. During ionization, the gas tubes also glow brightly with different colors. A tri-field meter may measure energy output from 5 to 10 feet away from the units.

Frequently Asked Questions

Q: How can the Tesla Energy Lights™ help?

A: The Tesla Energy Lights™ are designed to stimulate subtle energy activity. Although you may not always be aware of it, subtle energy (or the life force) is all around you. What do mind, heart and spirit have in common? *Subtle energy.*

The Tesla Energy Lights™ have a soothing, relaxing effect on the mind, heart and spirit. These frequencies are noticeably more soothing and conducive to meditation, typical of low voltage ultra-high frequencies.

Using the technology (meditating alone or in a group) can pave the way to deepened meditative states and new levels of group or individual consciousness. With regular sessions, the Tesla Energy Lights™ can motivate you to meditate naturally and easily.

Q: What is the advantage of two units at the same time instead of one?

A: Tesla Energy Lights™ offer the only electron donor system with independent bias components. Each AC & DC unit is a self-contained generator and broadcaster of synergized, balanced subtle energy. Our exclusive system offers unrivaled quality with a greater range of harmonics.

Using both units simultaneously supplies a complementary flow of energy. By combining these yin/yang energies, a full spectrum of balanced frequency harmonics is created, surpassing any other product available. Tesla Energy Lights™ offer a much greater value -- two units for less than the cost of others who sell single bias, technologically older and discontinued configurations.

Q: What happens during a session?

A: During a session, you may sit and/or lie down. Eyes can be open or closed. Setting your intention for the session can be beneficial -- "Today, I want to feel energized and peaceful." Then just relax, unwind and imagine the energy from the lights flowing through you. Each person's experience of the Tesla Energy Lights™ is unique.

Discover how Tesla Energy Lights™ can help you achieve your goals.
